

CODEFEST 2026 CHITWAN

Site handbook - every feature, and who uses it

Forbes College, Bharatpur-2, Kshetrapur, Chitwan
2083 Shrawan 29, 30, 31 (14-16 August 2026)
Code for Change - Let code lead the change

This handbook covers the whole site: what every page does, and what each kind of person is expected to do with it. Find your role in the contents and read that section - nobody needs all of it.

Who you are, and where to go

Participant	Sections 1 and 2. Your card, your team, your submission.
Team leader	Sections 1, 2 and 3. You own the project submission.
Volunteer	Sections 1 and 4. The scanner and the roster.
Judge	Sections 1 and 5. The judging panel on Sunday.
Mentor	Sections 1 and 6.
Executive	All of it. Section 7 is the admin panel; 8 is the runbook.

Everyone signs in the same way

You were given an email address and a one-time password. The first time you sign in, the site makes you choose your own password before it will let you anywhere else. Staff should do this BEFORE Friday morning - a volunteer cannot open the scanner until it is done, and the desk cannot wait.

1. Everyone

Signing in

There is no public sign-up anywhere on the site. Accounts exist only for people on the registration list, which is what keeps the event closed. If your email is not recognised, an executive has to create the account.

/login	Email and password. Sends you where you were headed.
/profile/password	Forced on first sign-in. Choose your own password.
/profile	Name, phone, institution, food preference.

Your identity card

The card is the QR you present at every desk - arrival, the canteen, the exit gate. It is colour-coded by role so the desk can tell categories apart at a glance, and it works from your phone screen or from a printed badge.

/id-card	Your QR, name, role, team and room.
-----------------	-------------------------------------

If your card will not scan

Go to the desk and give your name. Volunteers can look you up on the roster and an executive can check you in by hand. Nothing about the day depends on the camera working.

The schedule

The full three-day timeline, filterable by day. During the event it opens on today. Key Highlights narrows it to the sessions that matter: registration, the opening ceremony, the quiz, presentations and the closing ceremony.

/schedule	All sessions, by day, with zone and building.
/dashboard	What is happening now, and what is next.

Announcements

Organisers post updates here, and can target a single category - a notice for judges does not reach every participant. Urgent notices are flagged in red and appear on the dashboard.

/announcements	Everything posted, newest first.
-----------------------	----------------------------------

Install it on your phone

The site is installable. Add it to your home screen and the schedule and your card keep working when the venue wifi does not. A prompt appears on its own; you can also use your browser's Add to Home Screen.

Public pages

/about	What Codefest is, and who runs it.
/venue	Buildings A, B and C, and what happens in each.
/partners	Every partner, by tier.
/contact	Enquiries to the organising team.

2. Participants

Your team

Every participant belongs to one team. The roster shows your teammates, your room and your table number once the draw has run. You cannot submit a project until you are on a team - if the page says you are unassigned, tell an executive.

/team Teammates, room, table number, submission status.

Submitting your project

One submission per team, and any team member can edit it. Save early and often: the form keeps a draft, and a draft is not a submission. Press submit before the deadline.

- Repository link - where the code lives
- Live demo - if you have one deployed
- Demo video - a short walkthrough
- Pitch deck - the slides you will present from
- Documentation - anything the judges should read
- Screenshots - up to four links

/submit The form, with the deadline counting down.

The deadline is enforced by the database

When the window closes, writes are refused - not merely hidden. Nothing is gained by keeping the form open in a tab. Organisers can extend the window if the wifi fails, and that takes effect immediately.

Quiz and games

The quiz opens during its slot on Saturday evening and is timed from the moment you start. One attempt each. Scores and the time you took both feed the leaderboard, so speed breaks ties.

/quiz Whatever is currently published.

/leaderboard Live ranking.

Pitching on Sunday

The running order is drawn by the organisers and published in the app. The pitch page shows the order and the live stage clock, so you can see how far the room has got without standing at the front.

/pitch Running order and the live clock.

3. Team leaders

A team leader is a participant with one extra responsibility: the submission is yours to get in. Everything in section 2 applies to you as well.

- Check every teammate appears on /team. A missing member is a desk fix, not a form fix.
- Put something in the submission form on Friday, even if it is only a repository link.
- Confirm the status reads Submitted, not Draft, before the deadline.
- Know your table number and pitch position before Sunday morning.

4. Volunteers

Volunteers run the desks. You have the scanner and the roster, and nothing else - you cannot see health information, card tokens or anybody's password.

The scanner

/admin/scan Camera scanner. Set your posting once.

Choose your station and direction once when you start; the choice is remembered on that phone, through a reload or a relaunch. Then point the camera at cards. Every scan is logged the moment it resolves - there is nothing to confirm and nothing to tap twice.

Stations

Registration Arrival. The first scan of the event stamps check-in.

Canteen Meals. Pick which sitting you are serving.

Exit Leaving the building. Use direction Out.

Swag desk Kit and merchandise handout.

Meals

At the canteen the scanner shows a Sitting row: breakfast, lunch, snacks, dinner. It defaults to whichever the clock suggests, so at breakfast time you are already on breakfast. If somebody has already had that sitting today, the result card says so in amber.

Nothing is ever refused

A second helping, a suspended card, an unexpected direction - all of them are recorded and flagged, never blocked. The software's job is to tell you what it knows; the decision is yours. You should never have to argue with a screen while a queue waits.

The roster

/admin/roster Search anybody by name, email or team.

Use this when a card will not scan or somebody is not sure they are registered. It shows role, team, room, contact and whether they have checked in. Card tokens and medical notes are deliberately not shown.

A pre-set link for your posting

An executive can send you a link that arrives already configured, so your phone is set up without a briefing.

?station=canteen&meal=lunch Opens on the canteen, serving lunch.

?station=exit&direction=out Opens on the exit gate, scanning people out.

5. Judges

Scoring is on paper this year. The site gives you the entry list to work from - every submitted project, in pitch order, with its links.

/judge The entry list, once judging opens.

- Arrive by 9:00 AM on Sunday for the briefing and seating in the Main Hall.
- Evaluation sheets and scoring criteria are handed out at that briefing.
- Reserved seating and refreshments are at the judges' table at the front.
- Each entry lists repository, live demo, demo video, pitch deck, documentation and screenshots.

The list is empty until judging opens

An executive opens judging at the Sunday briefing, once submissions have closed. Before that the page says so rather than showing half-finished work. If it is still closed when you are seated, ask an executive - it is one switch on their panel.

6. Mentors

Mentors have an account, a card and the full schedule. Two mentor sessions are on the timeline - Friday evening and Saturday midday - and they run online, from the teams' allocated rooms.

- Use /schedule to see when your sessions fall.
- Your card works at the canteen and the doors like anybody else's.
- Mentors deliberately do not see submissions: coaching happens during the build, and unfinished work stays with its team.

7. Executives

Executives can reach everything. /admin is the index; every panel below hangs off it.

People

/admin/members Everyone. Search, filter by category, paginate.

- Create an account and mail a one-time password
- Resend a password when somebody is locked out
- Issue a new QR when a card leaks - the old one stops working immediately
- Suspend or restore access without deleting anything
- Change somebody's category

Teams

/admin/teams Every team, member counts, empty-team warnings.

/admin/teams/<id> Edit a team; add and remove members.

Renaming a team updates it everywhere at once - cards, the pitch order, the submission record. Deleting a team leaves its members in place as unassigned; a team with a submission cannot be deleted at all.

Attendance

/admin/attendance Every scan, filterable by day, station, sitting and name.

- Per-station and per-sitting totals - servings, and how many people they fed
- Manual check-in for a lost card, recording exactly the scan the camera would
- CSV export of the whole log

Submissions and judging

/admin/submissions Who has submitted, who is still a draft, who is missing.

- Move the deadline, or close the window immediately
- Open judging - until you do, judges see nothing at all
- CSV export of every team and its submission

The event

/admin/announcements Post a notice; target one category or everyone.

/admin/quizzes Publish or hide a quiz. Publish it at its slot, not before.

/admin/wheel Draw table numbers, and Sunday's pitch order.

/admin/pitch Stage clock and running order.

/admin/pitch/projector Full-screen clock for the hall projector.

Exports

/api/admin/members Roster CSV, with attendance and per-sitting columns.

/api/admin/attendance The complete scan log as CSV.

/api/admin/submissions Every team and its submission as CSV.

/api/admin/badges Every card QR as PNGs in a zip, foldered by category.

The badge archive is live credentials

Anyone who can scan a code in that zip can present that person's card. Keep it inside the organising team, and reissue a QR from /admin/members if one gets out.

8. Event-day runbook

Before Friday

- Every staff member signs in once and sets their password. A volunteer cannot open the scanner until they have, and 07:00 is the wrong time to discover it.
- Allocate rooms to teams, so the schedule's 'Allocated Room' means something.
- Run the draw for table numbers.
- Post a welcome announcement with the wifi password.
- Print badges, and check one scans with the app before printing the rest.

Friday - Day 1

- Desk opens 07:00. Station: Registration, direction In.
- Watch /admin/attendance for arrivals against the expected roster.
- Canteen switches to Lunch at 10:30 and Dinner at 18:00.

Saturday - Day 2

- Canteen runs four sittings: breakfast, lunch, snacks, dinner.
- Publish the quiz when its slot opens at 19:00, and hide it afterwards.
- Check /admin/submissions - chase every team still showing Missing.

Sunday - Day 3

- Close submissions at the deadline.
- Draw the pitch order if it is not already set.
- Open judging at the 9:00 briefing, once the panel is seated.
- Run the stage clock from /admin/pitch, with the projector view in the hall.
- Export all three CSVs before anyone goes home.

When something goes wrong

Card will not scan	Look them up on /admin/roster; check in by hand from /admin/attendance.
Locked out	Resend a password from /admin/members.
Card leaked	Issue a new QR from /admin/members. The old one dies at once.
Wifi died	Extend the submission deadline from /admin/submissions.
Judges see nothing	Judging has not been opened. One switch on /admin/submissions.
Quiz is empty	It has not been published. /admin/quizzes.
Database unreachable	The schedule still renders from a copy inside the app.

The site is a progressive web app with an offline fallback, but the venue wifi is the weak point every year. The desk should not depend on the network being good, and none of the scanning flows do.
